E. Analysis of Cost to Date by Major Project Segment

This item is difficult to obtain at this time without going into a thorough analysis of all purchase orders issued since the beginning of the contract. This is because no breakdown of charges was made on the project and everything has been lumped into 2005. At best, if such an analysis were to be made, assignment of charges ex post facto would be done on a judgment basis and would be only an approximation. This type of breakdown is, of course, being done on new projects at this time but there has been no intention to go back and attempt retrieval of major project segment costs from historical data on the old projects.

F. Analysis of Significant Changes

No significant changes are anticipated in accounts 2004 and 2005 between now and the date of completion.

STATINTL

MEMORANDUM

October 10, 1961

Listed here-with is a status of the Image Correlator,  
(Mechanical & Optical Components) as of Oct. 9, 1961.

During a recent Analysis, it was found that a considerable number of items for the 2004 Project had not been released. This information is contrary to that received by the Project Director on the 25th of September; which was in effect, that all items would be in fabrication after the purchase of the structure was completed.

Those items mentioned above are now in "Check-out",  
with a promise completion date of 10-12-61.
